Professional Summary

An innovative MEng student from Imperial College London with a strong passion for building end-to-end software. Proven experience in leading the full development lifecycle within an agile product team, from concept to deployment.

Education

Master of Engineering, Design Engineering, Imperial College London 2022-2026
Consistent Dean's List recipient (Years 1-3: 76%, 75%, 74%). On track for First Class Honours.

- Elected Academic Representative for 100+ students, where I improved student welfare by negotiating directly with the Head of Department to secure enhanced career support and restructured deadlines.
- Selected modules include Project Management (Business School) and Machine Learning, building a strong commercial awareness to complement technical abilities.

A-levels, Colchester Sixth Form 2020-2022
*A*A*A*A* in Maths, Physics, Computer Science, Design Technology*

Software Engineering Experience

Full-stack Software Engineer (Part-time), Tewke Ltd., London, UK Sep 2025-present

- Returned to continue development of a business-critical internal tool, now taking full ownership across the stack
- Designed the backend architecture (TypeScript, Express, Drizzle, PostgreSQL) with senior review and iteration
- Finished and scaled the assembly system for multiple device lines, integrating stock and part tracking with automatic deduction of parts as assembly steps are completed
- Defined the full product scope by working with accounting, operations, and assembly technicians, and created and managed all development tickets to drive delivery and ensure on-time completion for reporting deadlines
- System has supported the assembly of 1000+ devices in production, with QC and photo capture helping identify defects and troubleshoot customer issues

Frontend Software Engineering Intern, Tewke Ltd., London, UK Apr-Sep 2025

- Developed and shipped features for the company's flagship mobile app and embedded smart-home UI (Flutter/Dart) within an Agile team, contributing to sprints, stand-ups, and code reviews
- Led development of the initial version of the internal tool from concept to deployment (Vue.js), taking ownership of core functionality and architecture
- Managed the full SDLC including user research, testing, and containerised deployment using Docker

Teaching Experience

Undergraduate Teaching Assistant, Imperial College London Oct 2023–Jun 2024

- Supported first-year students in Computing and Mathematics through one-to-one and group sessions.
- Led sessions on object-oriented programming and software version control.

GCSE and A-level Academic Tutor, Self-employed Nov 2022–Present

- Designed and delivered personalised online and in-person lessons in Maths and Computing to 10+ students.
- Managed a private tutoring business alongside studies, including marketing, planning and payment management.

Projects

Yarn Health (AI Web App), 2026

- Rapidly developed a web app prototype to help users capture and structure their health experience between medical appointments using conversational AI (voice/text)
- Designed a dual-model AI system: a lightweight model for real-time conversation and a more capable model for structured summaries and longitudinal analysis, optimising performance vs cost
- Built the full-stack application using Nuxt UI and Supabase, leveraging managed infrastructure to accelerate development, including a complete authentication system and persistent user data

Technical Skills

Languages:	Python, JavaScript/TypeScript, Dart, HTML/CSS
Frameworks & Libraries:	React, Node.js, Vue.js, Flutter, Drizzle ORM, Pandas, NumPy, Torch
Databases & DevOps:	PostgreSQL, Docker, CI/CD, AWS (CLI), Git, Bash
Ways of Working:	Agile Methodologies, Full-Stack Development, SDLC, Stakeholder Management
Human Languages:	Polish (Fluent), English (Fluent), German (B1)
